	Design: COCHA WHITE 87 ■ 1,3 mm S40.71.83.0001.000
	Design: BEIGE RECOATABLE / LAMINATABLE ■ 1,3 mm S40.71.88.0001.000

RENOLIT GORCELL – A lightweight panel material with a host of benefits.

A combination of **RENOLIT WOOD-STOCK** composite panels and an ultralight honeycomb structure, **RENOLIT GORCELL** is formed from thermoplastic films which are bonded with composite material surface layers. The panel material is composed of plastic and natural fibres, whose weight saving attributes and high moisture stability make this an ideal component for caravans, campervan conversions, yachts and waterproof lightweight applications such as outdoor kitchens. **RENOLIT GORCELL** is available factory-laminated with **RENOLIT ALKORCELL** and other **RENOLIT** films and is fully recyclable.

RENOLIT GORCELL composite honeycomb panels are perfect for caravan and interior design applications, thanks to their lightweight, waterproof and rot-resistant composition.
